Professional Summary

Backend-oriented Full-Stack Developer with experience extending enterprise software through Java-based plugins, system integrations, and workflow improvements. Experienced in building configurable platform extensions, integrating locally hosted AI models, and developing web and mobile applications using modern frameworks. Focused on backend functionality, database integration, and delivering maintainable solutions to practical software engineering problems.

Technical Skills

Languages: TypeScript, Java, C#, Dart
Frameworks: Next.js, Express.js, ASP.NET Core, Flutter
Databases: PostgreSQL, MongoDB, Firebase
Tools & Platforms: Git, Postman, AWS

Education

Asia Pacific University of Technology & Innovation Kuala Lumpur, Malaysia
B.Sc. (Hons) Software Engineering, Second Class Honours (Upper Division) *Sep 2023 – Sep 2026*
– Completed degree requirements in September 2026; official certificate expected April 2027.

Professional Experience

Software Engineer Sep 2026 – Present
Self-Employed (Freelance)
– Developed custom Expert Advisors (EAs) and technical indicators using MQL4 for MetaTrader 4 (MT4), translating provided trading strategies and requirements into automated or semi-automated trading solutions.
– Assisted PT CV Bahagia in selecting an ERP system by evaluating available solutions against business requirements, system capabilities, and operational needs.
– Provided day-to-day IT support at PT CV Bahagia, troubleshooting and resolving minor hardware, software, and peripheral device issues encountered by employees to minimize disruptions to daily operations.

Software Engineer Intern Sep 2025 – Dec 2025
Joget Inc (Joget Technology Sdn Bhd)
– Engineered several reusable Java-based plugins for Joget DX8, expanding platform capabilities through configurable extensions that simplify integration into client applications and reduce the need for repetitive custom development.
– Developed a centralized broadcast messaging plugin enabling consistent announcements across integrated client-side pages, while improving CRUD workflows through sliding-panel interfaces that allow in-place record editing without unnecessary page navigation or full-page re-rendering.
– Integrated locally hosted Ollama models for AI-assisted code generation and automated ZIP exports, enabling inference without external per-token API charges. Developed PDF decryption functionality using a provided algorithm, extending the platform's document-processing capabilities.

Projects

Gamesphere Tournament Hub | *React, ASP.NET Core, PostgreSQL, AWS* GitHub
– Developed a full-stack esports tournament management platform using React, ASP.NET Core, and PostgreSQL, centralizing tournament information and management workflows to provide a more organized experience for tournament participants and administrators.
– Integrated AWS RDS, Elastic Beanstalk, and S3 to support managed database hosting, application deployment, and image storage, reducing the need for manual infrastructure provisioning and supporting maintainable cloud-based application operations.

Proof-of-Publish Timestamping Portal | *Next.js, PostgreSQL, Solidity, Hardhat* GitHub
– Developed a proof-of-publication portal using Next.js and PostgreSQL to help users establish verifiable records of digital publication, improving transparency and traceability of publication claims.
– Integrated Solidity smart contracts through Hardhat to support decentralized timestamp verification, providing an additional method of validating publication records without relying exclusively on centralized data.

Secondhand Marketplace Mobile App | *Flutter, Firebase* GitHub

- Developed a mobile secondhand marketplace using Flutter and Firebase, simplifying the discovery and management of secondhand listings through a centralized, mobile-friendly application.
- Integrated Firebase backend services for application data management and synchronization, reducing backend infrastructure complexity and enabling development without maintaining a dedicated application server.

Certifications & Awards

- 2nd Place, Joget NextGen Hack 2024 – Joget Technology Sdn. Bhd.
- Frontend Fundamentals Bootcamp – ONECODECAMP, Apr 2024
